

Fitting instructions

Mounting:

Mount unit between vehicle number plate and vehicle fixing point. Cut or shape the Braketext panel to size if required, and drill holes to suit fixing positions.

Wiring:

Black wire	- negative,
Green wire	- vehicle brake light,
Red wire	- 12v power source 1,
White wire	- 12v power source 2 (optional)

Note: when Red wire is energised, programs 1 – 5 can be programmed and displayed according to remote control settings. When White wire is energised, only message 5 will be displayed and remote control is not effective.

When Green wire is energised it overrides all other settings to display the brake light irrespective of remote control settings.

Configure your Braketext wiring to suit your individual requirements.
